Work experience

Software Engineer, Greenbyte

Gothenburg (November 2018 - present)

Working as Software Engineer in a cross-functional, agile software development team focusing on frontend and UI/UX. We're developing software that aims to make renewable energy cheaper for the consumer and more profitable for the owners.

My main focus is frontend development (React, Javascript, styling/CSS) and developing Greenbyte's own design system.

Developer, Funkis Multimedia

Gothenburg (September 2014 - October 2018)

We created all sorts of interactive applications and games, but the goal was always to create something educational. I coded all day long.

UI Developer, Sigma

Jönköping/Gothenburg (April 2010 - September 2014)

For the most part I developed web application and websites. I worked as a contractor in a number of different workplaces and industries.

UI Developer, Skill

Jönköping (January 2010 - March 2010)

Employee of Skill but worked for Sigma as a sub-consultant.

Web Designer, DFcommunication

Jönköping (October 2009 - January 2010)

My role was web developer of Wordpress sites (PHP/Javascript/CSS/HTML).

Support Technician, Telia Sonera

Jönköping (June 2009 - August 2009)

I worked as a support technician and supported Telia's telephone switchboards. The role included daily customer contact, both spoken and written.

Web Developer, The Farm

Lidköping (April 2009 - May 2009)

As a diploma thesis, I and a class mate worked in The Farm's office adding tags/labels functionality in their application "SIS-Index".

Education

Linnaeus University

Kalmar (August 2007- January 2010)

Higher Education Diploma with specialisation in Computer Engineering, Web programming.

Per Brahegymnasiet (upper secondary school)

Jönköping (August 2004 - June 2007)

I studied media, journalism and web development (Medieprogrammet).

Technical skills

Programming

I've been working with Javascript professionally since 2010 and React since 2015. I'm interested in functional programming and prefer to use Elm for personal projects. Most React projects I've been involved in have used some kind of state management using either Flex or Redux.
I've mostly used Git for version control. I have experience of working in and with backend systems written in Node or C#.

Visuals

I've been working with styling professionally since 2010 and during that time CSS has evolved in many ways. Today I most often prefer a CSS-in-JS approach (using Styled-components or Emotion), but each project is unique and there is not a single right answer. I've also worked with animations to create interactive applications or enhance the experience

Design systems is one of my greatest interests in the world of frontend development. I find their systematic approach to solving technical problems and UI/UX concepts very appealing. At my current position we are developing and using or own design system and that is something I really enjoy doing.
